Who are we?

Agape Innovations Limited is leading agro-based company in Uganda. We are into organic agro-inputs, Black soldier fly technology, Agri-tech and farmer related consultancy work.

At Agape, we pride in creativity, simplicity, price friendliness and environmental conservation

Join us as we make farming profitable, environmentally friendly and healthy.

Agape Innovations-Innovating agriculture

Insect control

Pheromone Lures

Tuta Absoluta lure

Known as the Leaf miner, Tuta absoluta is the most dangerous pest of tomatoes. It affects leaves, stems and fruit and can result to 70% yield loss.

Our lures are designed to attract and trap these insects so that they do not damage the plants. With only 20 lures in an acre, you have this problem solved.

FCM Lure

A major pest for avocado, roses, green pepper, chili, hot pepper among other crops, False codling moth (FCM) is a serious quarantine pest. It damages fruits making them inedible and of zero market value

Our Lures attract this pest onto the trap and it will be effectively controlled. you can use a sticky card, a delta trap or a water bath to trap this pest. 15-20 traps are enough for an acre.

Thrips Lure

Small but deadly, thrips are a leading cause of flower abortion and crinkling of fruits. They are a menace to passion fruits, and other bright colored fruits. They are also a big problem to green house farmers. They also cause bananas to turn dark and hard.

We have lures that are designed to control this pest. Our Lures are compatible and can be used along with sticky cards, delta traps and water baths.

Insect control

Traps

Yellow sticky traps

Yellow sticky traps are pheromone based yellow sticky papers that are used by farmers to control fruit flies in fruits and vegetables. the pheromone smell and the yellow color has proven a successful combination in controlling fruit flies.

Effective in orchids, green houses, compounds and field gardens for fruits and vegetables.

Blue sticky traps

Blue sticky traps are pheromone based Blue sticky papers that are used by farmers to control Thrips and flies in fruits and vegetables. the pheromone smell and the yellow color has proven a successful combination in controlling fruit flies.

Like the yellow traps, blue traps are effective in orchids, green houses, compounds and field gardens for fruits and vegetables.

Delta traps

These are basically casings that are used to house sticky cards and pheromone lures. Delta traps increase the effectiveness and the shelf life of the lure while in action.

Our delta traps are made up of a hard yet biodegradable material that is not only environmentally friendly, but will also give you value for money.

Special Items

Assortments

PICS bags

Pics bags are hermetic, three-layer bags. they are designed to give you a durable, high-quality storage solutions designed specifically for grain and flour storage. Constructed from sturdy, weather-resistant materials, these bags provide reliable protection against moisture, pests, and contamination, ensuring that your grain remains fresh and secure. They are available in 50kg capacity.

Tse tse fly traps

Our tse tse fly traps are specially designed to combat the invasive tse tse fly with highly effective, attractant-based systems that lure and capture these pests. Featuring durable, weather-resistant materials and user-friendly setups, these traps help reduce tse tse fly populations and minimize the risk of transmitting diseases. Ideal for agricultural and outdoor settings, Our tse tse fly traps offer a practical and eco-friendly solution for managing fly infestations and protecting both livestock and human health

Jute / Gunny bags

Gunny bags, also known as jute bags, are robust and eco-friendly storage solutions crafted from natural jute fibers. Known for their strength and breathability, our bags are perfect for storing and transporting a variety of bulk materials, including grains, seeds, and fertilizers.

Rhizobia

"Rhizobia are beneficial soil bacteria that form symbiotic relationships with leguminous plants, enhancing soil fertility by fixing atmospheric nitrogen into a form that plants can readily absorb. By promoting healthy root development and boosting plant growth, rhizobia play a crucial role in sustainable agriculture, improving crop yields and reducing the need for chemical fertilizers.

Agape Organic Fertilizer

Agape Organic Fertilizer is a premium, eco-friendly soil enhancer made from natural, renewable materials. Designed to improve soil structure, boost nutrient content, and promote healthy plant growth, it offers a balanced mix of essential nutrients and organic matter. With its sustainable formulation, Agape Organic Fertilizer supports vibrant plant development while enhancing soil fertility and reducing environmental impact.

Agric. Lime

Agric lime, also known as agricultural lime, is a natural soil amendment used to improve soil health and enhance crop productivity. By increasing soil pH and reducing acidity, agric lime helps optimize nutrient availability, promotes better root development, and supports overall plant growth. Its finely ground, easy-to-apply formula makes it an effective solution for correcting soil imbalances.

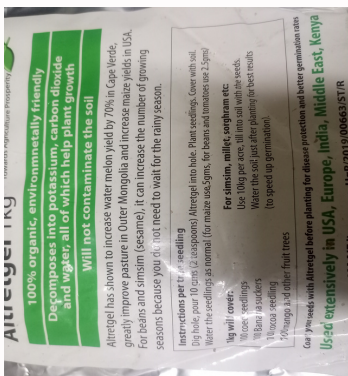

Rebeearth

Rebeearth is a revolutionary organic fertilizer designed to rejuvenate soil and promote robust plant growth. Formulated with a unique blend of natural nutrients and bioactive compounds, Rebeearth enhances soil fertility, improves nutrient uptake, and stimulates healthy root development. Ideal for sustainable agriculture and eco-conscious gardening.

Fruit and flower buddy

Fruit and Flower Buddy is a premium plant nutrient blend. Enriched with essential elements such as calcium, nitrogen, boron, and zinc, this versatile formula supports vigorous growth and vibrant blooms. Calcium strengthens cell walls, enhancing plant structure and resistance to diseases. Boron aids in the development of flowers and fruit set, and zinc is crucial for enzymatic functions and metabolic processes.

Soil water Retainer

Altretgel Soil Water Retainer is an innovative solution designed to enhance soil moisture retention and optimize water usage in your garden or agricultural field. This advanced hydrogel absorbs and retains large quantities of water, releasing it gradually to plant roots as needed, which helps reduce irrigation frequency and prevent drought stress. By improving soil structure and moisture availability, Altretgel promotes healthier plant growth, increased yield, and more efficient water management.

Rat Control Gel

Rat Control Gel is a highly effective rodent management solution designed to target and eliminate rat infestations with precision. This potent gel attracts rats with its enticing bait and delivers a powerful, fast-acting formula that disrupts their digestive system, leading to their controlled elimination. Easy to apply in hard-to-reach areas, Rat Control Gel is ideal for both residential and commercial use.

Cockroach Control Gel

Cockroach Control Gel is a powerful, easy-to-use solution designed to effectively eliminate cockroach infestations. Formulated with a potent attractant and a fast-acting insecticide, this gel lures cockroaches to the bait, where they ingest the product and carry it back to their nests, ensuring widespread eradication. The gel's discreet application and long-lasting effectiveness provide a comprehensive approach to managing and controlling cockroach populations.

Ant Control Gel

Ant Control Gel is an effective and easy-to-use solution designed to eliminate ant infestations at the source. This highly attractive gel lures ants to the bait, where they consume the gel and carry it back to their colony, leading to the targeted eradication of the entire nest. Suitable for use in various settings, including homes and commercial spaces, the gel's discreet application ensures minimal disruption while providing long-lasting results.

SERVICES

SOIL TESTING SERVICES

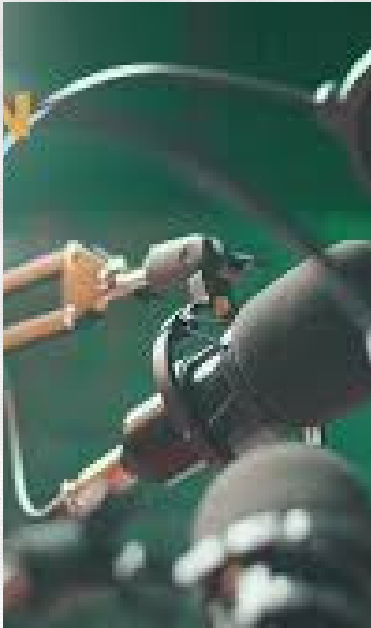

Our soil testing services provide comprehensive analysis to ensure optimal soil health and fertility for your gardening or agricultural needs. By evaluating key parameters such as nutrient levels, pH, and soil composition, we deliver precise insights that help you make informed decisions about fertilization and soil management. Our expert team uses advanced testing methods to identify any deficiencies or imbalances, offering tailored recommendations to enhance plant growth and maximize yield. Trust our soil testing services to support your efforts in creating a thriving, productive growing environment with scientifically-backed solutions.

SERVICES

Black Soldier Fly Training

Our training on black soldier fly farming offers comprehensive instruction on cultivating this highly efficient insect for sustainable waste management and animal feed production. Participants will gain hands-on experience and expert knowledge on every aspect of black soldier fly farming, from setting up and maintaining breeding environments to harvesting larvae and optimizing production. Our program covers essential topics such as lifecycle management, waste processing, and the nutritional benefits of black soldier fly larvae. By the end of the training, you'll be equipped with the skills and insights needed to successfully integrate black soldier fly farming into your operations, promoting environmental sustainability and enhancing resource efficiency.

SERVICES

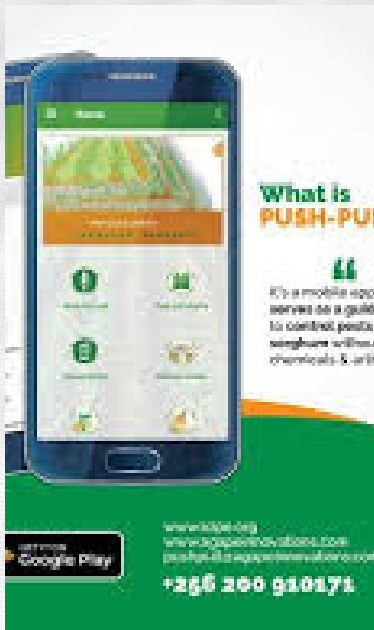

Agape Media Studios

Agape Media Studios is dedicated to helping farmers harness the power of the digital revolution and engage with the online community through a range of innovative media services. Our studio offers engaging podcasts, interactive online conversations, professional recordings, impactful adverts, and compelling storytelling specifically designed for the agricultural sector.

Digitalizing farming.

By providing farmers with cutting-edge digital tools and platforms, we empower them to share their stories, access valuable insights, and connect with a global network of peers. Agape Media Studios is your gateway to leveraging digital advancements to enhance your farming practices and stay at the forefront of the agricultural industry

SERVICES

Agape TECH

At Agape Tech, we specialize in developing innovative mobile applications tailored to address the unique challenges faced by farmers in today's digital age. Our agricultural-based apps are designed to streamline farm management, improve productivity, and provide actionable insights through advanced technology. From crop monitoring and soil analysis to weather forecasting and resource management,

Using a phone to farm.

Agape Tech's solutions aim to simplify complex processes and enhance decision-making. By integrating cutting-edge technology with practical farming needs, our mobile applications empower farmers to overcome obstacles, optimize their operations, and achieve greater success in their agricultural endeavors

Community Livelihood Trainings

We provide comprehensive livelihood and community farm training across all regions of Uganda, dedicated to empowering local farmers and enhancing agricultural practices. Our programs offer practical, hands-on instruction in essential farming techniques, sustainable practices, and effective farm management strategies. By delivering tailored training that addresses specific regional needs and challenges, we support farmers in improving their productivity, increasing their income, and fostering community development. Through our commitment to education and practical support, we aim to build stronger, more resilient farming communities throughout Uganda

Consultancy

We offer personalized coaching and mentoring for entrepreneurs in agriculture, aspiring farmers, and investors interested in Uganda's agricultural sector. Our expert guidance helps individuals and businesses navigate the complexities of the farming industry, from startup strategies and operational best practices to investment opportunities and market insights.
